

# Operation anytime, anywhere with novaWeb EYW300 – for existing plants, too.

novaWeb EYW300 opens up new horizons for remote access to properties. Existing plants – for example, those with no management level until now – can also be equipped for remote web operation at little cost. novaWeb EYW 300 is also ideal for properties with several tenants or sub-tenants, and for properties with restricted access.

The novaWeb embedded web server enables remote access to the plants integrated into the system, thanks to modern infor-

After switching on, the network is searched by the EYW300 and, once all the connected automation stations have been polled, the plant is displayed in suitable form.

*"Thanks to novaTouch and novaWeb, we offer every possibility for plant operation – on the spot, or from any other location."*

Lukas Klausmann

mation and communication technologies. The plant can be monitored and, if necessary, controlled from anywhere, using a browser on either a normal commercial computer or simple clients such as PDAs and smartphones. The interface with the automation stations is formed by the novaNet291 router and the Sauter novaNet system bus. To give protection against unauthorised access, the web server has an integrated, parameterisable firewall, plus four password levels for the different access options.

In addition, the system records values that can be presented in dynamised plant schematics.

facility management, and for maintenance and servicing, too.

## Save expense and energy in the long term

Remote control with novaWeb EYW300 allows energy-optimised operation of a plant with minimal expenditure of time and human resources. On-site interventions can be cut to a minimum thanks to early detection of potential irregularities. This applies to direct operation as well as

## An innovative on-the-spot alternative: operation via novaTouch

Another method of operating a plant locally – just as good as novaWeb – is via novaTouch, an advanced touch-panel. novaTouch offers versatile configuration and a simple user interface, making it ideal for heating and ventilation plants, underfloor heating and for use with heat pumps and district heating.

## Simple upgrade for existing plants

The EYW300 is easy to connect to existing plants. All that is needed is to configure the type of connection (analogue modem, ISDN, ADSL router, network data) for the novaWeb.
